

DB1000

Ice Maker Water Treatment

Model DB1000 addresses the number one ice maker water problem of hard scale build-up that either reduces ice production or stops ice production. This requires costly ice maker maintenance and usually requires buying ice while waiting for the ice maker to return to operation. Model DB1000 also controls other potential ice maker water problems of corrosion, chlorine, and sediment.

BENEFITS

- Provides continuous ice production
- Reduces ice maker maintenance
- Controls ice maker break downs that require buying extra ice
- Only one replacement cartridge per year
- Built in Multi-stage filtration to prevent premature clogging of filter
